Clayton Navaro® Product Profile

Formulation

125g prothioconazole + 125g tebuconazole.
EC formulation.

Pack Size

5L

Crops

Wheat, Barley, Oats, Winter rye.

Use Rate & Timings

Apply at 1.0 L/ha for a maximum of 2 treatments per crop before end of flowering GS69 (wheat/winter rye) or apply at 1.0 L/ha for a maximum of 2 treatments per crop up to beginning of flowering GS61 (barley/oats).

Fungicide timing programmes

Clayton Navaro® is ideal for use in the main T1, T2 and T3 timing windows for Winter wheat and in the main T1 and T2 timings for Winter barley.

To manage fungicide resistance risk always follow FRAG best practice guidelines. Resistance management should be considered throughout the spray programme.
